Guilherme Jorge De Araújo

TECHNICAL & PROFESSIONAL PROFILE

I am currently a Systems Development student at SENAI Morvan Figueiredo. So far, I have studied many areas related to the field: on the front-end side, color psychology, Gestalt principles, HTML and CSS; on the back-end side, JavaScript, Angular, SQL and Python. Our methodology is based on hands-on practice through many projects, which can be found (along with more information about the course and my progress in the field) in my portfolio, which is still under development due to constant updates: https://bit.ly/4rauMYj

SKILLS

Teamwork;

Time management;

Empathy;

Proactivity and initiative.

EDUCATION

Technical High School Diploma in Systems Analysis and Development at SESI/SENAI

2025 – 2026

DATA ANALYSIS

In addition to queries on local databases with SQL and practical projects using an integrated database, in my Technical Course, and in another specific course, I learned to use Power BI, a platform for creating interactive charts and dashboards, with an emphasis on supporting data-driven decision-making through the analysis of the data involved.

FEATURED PROJECTS

The portfolio mentioned above contains all of these projects; however, I thought it best to include here the ones that have stood out the most so far along this journey...
